***Allowable Subject Matter***

1. Claims 1-25 are allowed.

Independent claims 1, 7, 16, and 22 recite a block matching method (claims 16 and 22) and a block matching processor (claims 1 and 7) including "...for flexibly supporting block matching motion estimation at motion vector prediction modes for a plurality of matching blocks of pixels having non-uniform sizes that are multiples of a smallest matching block of said plurality of matching blocks, said processor comprising: a plurality of difference unit, D-unit, arrays configured for respectively generating an absolute value of a respective smallest size matching block, each of the plural D-unit arrays comprising a plurality of D-units that are arranged to correspond with an arrangement of pixels of a respective smallest size matching block each D-unit array being configured for calculating the pixel-to-pixel differences between the pixels of a current frame and the corresponding pixels of a reference frame and for converting the differences to absolute values; and at least one accumulator unit (A-unit) including a plurality of accumulators. said accumulator unit being corrected to the D-unit arrays for generating an SAD (Sum of Absolute Difference) for each smallest size matching blocks and an SAD for all of the plurality of matching blocks of pixels having non-uniform sizes by hierarchical addition of the absolute values of the smallest size matching blocks received from the D-unit arrays..." which is a feature that is not anticipated nor obvious over the art of record. Dependent claims 2-6, 8-15, 17-21, 23-25 are allowed for the reasons concerning the independent claims.
